What's New in the AutoCAD?

Bring users' comments into drawings. Request feedback in the new Markup Assistant, a lightweight dialog that lets users comment on a drawing with their own drawings, images, and other markers. The Assistant also allows users to import, export, and sync annotations with comments from other sources. Send feedback to your designs. Users can send feedback directly from a browser to a drawing via a web-based service. This enables colleagues to provide feedback and receive rapid responses from you. Fully editable drawings. Designers can easily view and edit parts of their drawings. A user can perform a query and still edit a portion of a drawing, such as changing a reference point. You can access feedback for your drawings from anywhere. You can pull in all of your designs, including those that you forgot about, and receive feedback for each. Customized feedback: Multiple color, line and text styles. Enable or disable specific colors, line and text styles for more control over feedback. Show exact colors. Set a color as the "gold standard" color. Users can then request feedback using that color alone or with other colors as well. Choose which designs to show. Show feedback for only a subset of the entire drawing set. This lets users easily focus on which drawings are problematic. Import and export comments. Comments you create and send to AutoCAD can be imported and exported to other applications, such as email. Use Annotations to quickly edit any object in your drawing. Create new lines, arcs, points, and polylines. Add new text or a picture to an existing object or paragraph. You can even use the original text to update it. Edit existing text, graphics, and pictures. The Markup Assistant includes a new tool that lets users quickly edit existing text, graphics, and pictures. You can set a drawing-specific marker color to show feedback. For example, you can set a red marker for comments on blue lines. Keep track of your feedback. If you have a drawing set of designs with issues, you can add the drawings to a collection that you can later check off as you resolve them. Send feedback by email or other means. You can also request feedback through other applications that you use. You can even import comments from other applications and send them back to AutoCAD. Review design reviews more easily. You can
