Filling an image is a common task in Photoshop. It can be used to fill in colors to pixels to make photos look a little more realistic or to make an image look more interesting. A typical use of the Healing Brush involves repairing image defects. This is normally done by first selecting a region of the image that you would like to restore and then using the brush to match the colors in the surrounding area. The Quick Selection tool can be used to make selections quickly and easily. Choosing the Quick Selection Tool from the Tools menu enables you to select a rectangular area based on the selected point. There are various Pen tools available in Photoshop. You can find them by choosing Pen from the Tools menu. The Pen tool can be used for painting. When you select a brush, the Pen tool turns into a paintbrush. You can then use the brush settings to change the painting size, shape and color. The Reverse Brush works like a paintbrush and eraser combined. The Reverse Brush allows you to use the edges of the brush to turn pixels on and off. You can use the Pen tool for drawing lines on a photo. Use a small brush with a strong line. By holding down the Alt key while you select the brush, you can create multiple lines. The Pen tool can also be used to add text on a photo. The default brush settings and rotation settings are perfect for adding text. Some brushes can also be used to create gradient fills. By drawing with the Rotate tool, you can create a gradient from one color to another. Dragging with the mouse while you hold down the Alt key will rotate the gradient. The Brush panel contains a number of brushes. The brushes on the left side are available in Photoshop Lightroom. Pixel-based brushes are used to paint in a photo. Usually, they work similar to the paintbrush. But sometimes you might be able to make use of the Bristle option. If you press the Alt key when you select one of these types of brushes, you will be able to brush with Bristle. You can apply gradients to an image by choosing the Gradient tool and pressing the Alt key. The Gradient tool enables you to create gradients with various colors by dragging around the image with the brush. The Gradient tool is extremely versatile and is similar to a paintbrush. You can also create complicated gradients by combining multiple brushes. The

Q: Template tag always showing as active while saving I'm using Django 1.7 and I've made some custom template tags. I'm able to insert the tags in the template page. But as soon as I save the page, the template tag appears as active in the template section. It shouldn't be active at all. Is there a way to hide this? All I want to show is something like `{% in_main_tag "something" %}`. But I don't want to show this. A: You could get the main tag and store it in a variable. Then display it after you save the current page. Here's an example of the template tag:

```
from django import template
import re
register = template.Library()

def get_main_tag(context):
    main = "hello world"
    path = re.sub("[^/]+$", r"\1/", context['request'].path)
    url = "" + path
    print(url)
    try:
        html = urlopen(url).read()
    except:
        return ""
    @register.filter(name='main_tag')
    def main_tag(context):
        return get_main_tag(context)

Usage: {% main_tag as main_tag_html %} {{main_tag_html}}
```
