There is some overlap in content between the books and Elements. When you create an image in Photoshop Elements, you can save the file in JPEG, TIFF, PSD, or Raw format. You

Q: XDocument to List of List is there a (simple) way to convert XDocument to List of List? I need to convert my schema that i wrote (using LINQPad) to a .Net Version. So that i can add it to a class file and run a small project from it. Right now i use xDocument to show the schema and get information from this. If i want to convert it to a List of List i have to use XmlDocument. To create the Document from the schema I use the XDocument.Parse(Schema.xml) I am now looking for a solution to create the List directly from the Schema. So that i dont need to go back and forth. Or if someone has a good Idea how to do this using LINQPad and save me from the hour of searching and combining the right string and XmlElement..... A: You can try the following (doesn't use LinqPad or XmlDocument, rather direct IEnumerable calls):
`public static IEnumerable<T> LocateNodes(XDocument doc, string root) { return doc.Descendants(root) .Where(e => e.Name.LocalName == "foo") .SelectMany(e => e.Nodes() .Select(n => n.Value) .ToList()) .ToList(); }`
Usage: `var doc = XDocument.Parse(@"ab"); var nodes = LocateNodes(doc, "root"); Console.WriteLine(string.Join(";", nodes));`
Output: [
