HMI (Human-Machine Interface) - AutoCAD provides a graphical interface for access and editing of drawings. The display window is organized into three main panes that can be modified and resized as needed: the Layer Pane, View Pane, and Properties Pane. Each pane has various options, and can be further divided into smaller panes. Linework - AutoCAD has linework and 3D-capable linework modules, which create and modify lines and circles, as well as planes and arcs, and select objects. They are used to define geometry, for instance to create the walls of a building. They also enable the creation of 3D linework (and 3D surfaces), to create buildings and plant. Geometry - AutoCAD has a collection of geometric primitives, which can be placed and edited. These include 2D shapes (lines, arcs, and circles), 3D shapes (planes, volumes, and solids), and 3D Boolean primitives (faces, edges, and vertices). Dimensions - AutoCAD has a number of dimensional tools which can be used to add a measure to the object's coordinates (namely inches, feet, meters, and centimeters). Spline - AutoCAD has a spline tool which can be used to create general curves and surfaces. This includes lines, arcs, and spline solids. Primitives - AutoCAD has a variety of geometric primitives, including several non-polygons, used in combination with each other. The main purpose of these is to be used to create things such as walls, cabinets, pipes, and gear racks. There is a set of primitives that have a polygonal appearance. These include the box, spheroid, cone, cylinder, drum, sphere, torus, cone frustum, wedge, half torus, half cylinder, tapered cylinder, ellipsoid, and circle. Views - AutoCAD has a collection of views, which can be used to view parts of a drawing. These include drawing windows, windows of objects, and windows of the properties of objects. Export and Import - AutoCAD supports both export and import of drawings (for example, to generate drawings from sketchup), as well as exporting of all or specific layer properties to external formats. It is also possible to import AutoCAD files into other applications such as SketchUp, JMRI, and WebDAV. History Auto ca3bfb1094

During this fiscal year, our major goals were to evaluate the relationships between local environments, physiologic responses, and susceptibility to infection in adult CF patients and to begin a program of pilot studies to test interventions in CF patients in the community. The rationale for these goals is based on a series of observations in the CF patient population, including the following: 1) the patients with CF live in environments which are, for the most part, less hospitable to bacterial infection than environments in which non-CF populations live; 2) these patients are, for the most part, neutropenic at the time of exposure to infectious agents; 3) respiratory failure is an almost constant problem; 4) pulmonary function can often be monitored in CF patients to assess the degree of impairment as a result of infection; 5) there are procedures available for controlling some of the most problematic infectious agents; and 6) these procedures can have benefit in the treatment of CF patients. Although the impact of these observations is not fully known, it is clear that CF patients may represent a population which could benefit from various interventions which could enhance their ability to maintain and recover from infection. We have used a protocol for the evaluation of bacterial colonization and infection in CF patients in the community as a foundation for the development of pilot studies and clinical protocols to evaluate a variety of treatment and prophylactic regimens in the CF population. We believe this effort will allow us to begin to define the impact of various treatment and prophylactic regimens in CF patients. Pilot studies have been designed to evaluate the benefit of using a DNA vaccine for the prevention of *Pseudomonas aeruginosa* infections. This project was completed in the latter part of this fiscal year and showed that DNA vaccination can protect mice against a heterologous strain of *P. aeruginosa*. A series of other immunization protocols are currently being tested.
