On May 4, 2012, Autodesk announced that in 2011 it had shipped more than 50 million AutoCAD licenses to customers worldwide. AutoCAD LT, an entry-level version of AutoCAD, was released in July 1992 and is the first release of AutoCAD to include 2D line and area drawing tools. AutoCAD's flagship product AutoCAD LT was designed to be the first and simplest user interface for users with little experience and fewer requirements. Its 2D drawing tools are somewhat limited but still include many common features. AutoCAD is the first CAD program to include features for both 2D and 3D. Licensing & Subscription AutoCAD LT and AutoCAD are both sold under the "Academic, Educational, Government" (AEG) license type, which is the type of license for educational and academic institutions. AEG licenses are free of charge for students, faculty, and staff at educational and academic institutions, and the software may be used and distributed by them for educational or academic purposes. Students and faculty at educational and academic institutions, however, are usually only licensed for the license term of the institution or for the term of the student or faculty member, and are often prohibited from selling the licensed software after the license term. The software and licenses are also available for commercial purposes, which may include unlimited use and redistribution of the software, on a multi-user basis. In a commercial setting, companies can purchase an entire license for the software for use on a single computer and for a single user, or they can purchase a multi-user license, which provides unlimited use of the software for multiple users. AutoCAD, AutoCAD LT, and other software products in the AutoCAD suite have moved from a non-exclusive license to an exclusive license. Exclusivity means that only one entity is granted the right to make copies of the software. In recent years, Autodesk has begun to offer lifetime licenses for AutoCAD and AutoCAD LT. Under such a license, the software is included in a disc that is delivered to the customer. This disc is stored on a server at the customer's premises, and can only be accessed by the client who purchased the software. This means that the license is perpetual, as the software is "perpetually supplied" to the client. Autodesk initially made these types of license available only to commercial customers.
