Q: How do I use "Move Fastest" function in Javascript? I tried to implement the following Code in to store the web page content into database with the following javascript code. var aNode = document.createElement('a'); aNode.href = "www.bbc.co.uk"; aNode.onmouseover = doit(aNode); document.body.appendChild(aNode); function doit(aNode) { alert("hello"); document.forms['main'].submit(); return false; } It works, but it shows error, as it said that this webpage doesn't have the "move fastest" function! How can I modify it so that I can store the contents of the web page in database? A: You need to update your code to make sure the correct method is used. The moveFastest() method returns a string, which is then displayed as text in the HTML DOM. You will need to change this line aNode.onmouseover = doit(aNode); to something like this aNode.onmouseover = function() { doit(aNode); } Subscribe To Sunday, June 26, 2013 The worst part about blogging is that it's a reflection of your state of mind, but I also know that when you write about things that you're thinking about, well, it's not like you're talking to a stranger.
