The model, which is meant to be applied for polymers with random long range order, describes the evolution of the average translational order parameter as a function of temperature, which is found by solving an algebraic equation. We first derive the equation, and

show that the asymptotic solution is given by a certain function of a dimensionless temperature (thermal age). We give the temperature-dependence of the function and show that it yields the same result as that of the Kohlrausch-Williams-Watts law. As a numerical example we take a polymer model with short range order.The leader of the Free Democratic Party has been elected as mayor of Berlin, Germany. The FDP is the largest party in

the German parliament, the Bundestag. The party is headed by Christian Lindner. Mayor Bert Jacobs called on his opponents to come together at the first board meeting. "I know it will be hard to work together, but I promise that I will be working with all of you to make the council and the city work well for everyone," he said. Mr. Jacobs also thanked the entire population of Berlin for their voting support. Since the city's founding in the 13th

century, the Free Democratic Party was not even represented. Wolfgang Wieland, leader of the Social Democrats, lost by just over three percentage points in his bid to remain mayor. Mr. Wieland said he was "relieved" by his defeat and congratulated Mr. Jacobs. The election will govern Berlin until 2023. Get The Brief.
