Improve care for vulnerable older people with computerized clinical decision support. Medlock, S.K.. Publication date. 2015. Version of the document. Older people need more attention for a variety of reasons, including aging, declining health and social status. However, in some areas, such as care for the elderly, care for the sick, patients with cognitive impairment and dementia, computers and new technologies are required to assist doctors, nurses and other specialized professionals working with vulnerable people.
