The present invention relates to a distribution device for molds for the manufacture of molded articles, particularly structural parts for motor vehicles and having a plurality of molding tools arranged on a mold carrier, each tool comprising a molding space for a mold part of a respective structural part, particularly an inner part thereof and having two substantially mutually facing mold surfaces between which the mold part is formed. A distribution device of this type is disclosed in the U.S. patent application Ser. No. 07/994,335. This device comprises a distributor comprising two mold guide belts each provided with a molding space. In the molding spaces a molding punch and an ejector are arranged, which cooperate to form the mold part. After the molding process, the mold parts are introduced into the distributor. Thereafter the f988f36e3a
