KEYMACRO is a software macro recorder, which allows you to record every single keystroke in your keyboard. The software supports both Windows and Linux operating systems, so it can be used with any computer. Once the macro is created, you can record it from either computer, even over the Internet. KEYMACRO is designed to have minimal interaction with the users, so it doesn't store any personal information or log the keys that have been pressed on the computer. Any personal data that is saved in KEYMACRO will remain intact even after the program is closed. Once the recording is completed, you can watch how it was created on the macro list. You can also edit a macro in the program and create new ones. KEYMACRO is a very simple tool that provides a simple way to record and playback the pressed keys on the keyboard. It allows users to set the length of the record and playback, so it can record a few seconds, half of a minute or more than an hour. The program comes equipped with a handy tutorial that explains how to use it, and it has a detailed help section that is accessible from the KEYMACRO's start menu. Once you begin using the application, it will start to work in the background, saving the data. You don't need to use the program regularly to record the keyboard keys. Instead, you just need to start typing on the keyboard and then hit the "Record" button. After you're done, you can view all the records in the "Playback" window. The software isn't very user-friendly and doesn't have many options, but you can use it to record your passwords. If you're planning to log in to a website that requires the keyboard logging, you can use this simple macro recorder. This is a very simple software that has some useful features. However, it doesn't give the user a chance to choose the time period for the recording. Therefore, it may store all the entered characters and come up with some problems, when you'll try to open it for the next time. Since the application doesn't offer any automation tools, you won't be able to see the entered data in the program in the playback window. KEYMACRO is a useful program, but we don't recommend it to novice users 2edc1e01e8
