As mature as Photoshop Elements is (it must be nearly into its 20s as far as versions), Adobe keeps creating new features to incorporate. Often, Elements is given features before Adobe Photoshop and Adobe Photoshop Lightroom. Many of these new features are a result of Adobe Sensei Artificial Intelligence (AI) that allows otherwise complex manual tasks to be handled automatically.

Which of the new features are right for you? The answer is that every one of them is right for you. The number one mission of **Elements** remains: to edit digital images with ease and standardize your workflow.

More compact than Adobe Photoshop, **Elements** is better-suited for the home user, but can do all of the superb image editing you do with Photoshop. Of course, the money-saving factor means you pay less for usage, but it's not hard to justify the price when you have the world's best post-process image editing tool running on your home computer! Given the increased population of many of the new 4K displays on the market, Photoshop 5.2 offers a 4K canvas update. The extra pixels don't really "need" to be there, but it is nice to have the option. I suspect Photoshop will be the last major version of this program to offer such an option, as 4K content is starting to pop up in movies and television. I and the rest of the Lightroom users will be anxiously awaiting the next major revision of Lightroom. 5.2 also contains a number of fixes and improvements to nonlinear editing features, including LRT. It remains to be seen how the latest media solution from Lightroom can improve the nonlinear editing process especially with the move toward non-destructively editing workflows. Additionally, its limitations, among other things, remain very important. The only lesson here is to not buy into hype. The latest version of Photoshop does not have everything everyone is wishing for,

but, in many ways, it still fills a major void that has existed in the photograph editing field over the last decade or so. The feature set and usability make it one of the best applications available on the market
