Keymacro allows you to turn the number of keys pressed into a parameter This is a specific application for the General MIDI Interface KB-08-09 and the keys F8, F9, F10, F11, F12,... Keymacro is a reliable product, which serves as a script assistant. All existing operations for programming can be developed easily and saved as script files. Easy to use The user interface of Keymacro is optimized to facilitate the use. The application enables the user to save the basic settings for each function in a file so that the settings can be loaded after launching. Features at a glance Keymacro uses the General MIDI interface for saving and loading the scripts, even with the GAT implementation for adding additional functions. Additionally, the preset parameters of the F-Numbers are loaded from the interface. Keymacro can be used with the MIDI-Block 1.0 from General MIDI and is compatible with all Common Short and Special Keys (Up to 14 different event numbers). A continuous programming via a file is possible. The user can call the defined functions one after another. If the preset

parameters are available for a function the user can call the function without any further information, which saves time and prevents extensive data input. The size of the scripts used is limited. If the number of characters in a script exceeds the limit defined (default value is 1000 characters), the application can call a custom dialog box which permits the user to enter additional characters. Keymacro is equipped with a help function, which gives the user information about the function and the parameters. Conclusion Keymacro is a perfect assistant for the keyboard operator, which enables the user to develop complex functions with ease. ## **What's New In P2 EXplorer?**

Minimalist layout Once launched, the program makes available a straightforward main application window that permits loading one or more image files that appear as separate drive in the file manager. Every entry is accompanied by details referring to how the space is occupied; as such, the user is informed about the total capacity of the drive, the amount of free space available and the amount of used space. Features at a glance P2 eXplorer can be used for loading an impressive number of disk images from various programs. It works with non-compressed WinImage files as well as with RAW images from Linux and other utilities. Moreover, it can work with compressed and encrypted PFR (Paraben's Forensic Replicator) images and includes support for logical and physical types. Additional functionality consists in MD5 checksum and hash verification for making sure that the file has not been changed in any way. Conclusion Even if the application is aimed at professionals it can be used by regular users, too. P2 eXplorer provides a simple interface and seamless mounting of the image file in the Windows environment, the data being available as if stored on a physical drive. Forensic concordance between biometrics and DNA in human identification. Currently there are only 2 biometrics unique to a human being, the DNA and blood group. In theory, with the use of microsatellite data, a

new biometric could be added to the list. In practice, with the increasing problems in the criminal justice system, an inexpensive, accurate, and rapid method of identifying an unknown body would be a great boon. We have developed a system to test the possibility of identifying a new biometric with DNA. We have isolated DNA from 53 known individuals and then compared the DNA with the corresponding blood type. An individual can be identified with over 90% accuracy with their blood group alone. However, the combination of a DNA fingerprint and blood group resulted in an identification accuracy of 96.2%. Furthermore, as microsatellite data become more widely used, more unique biometric traits could be added to the list.

Hooker flooring Hooker flooring is a type of European hardwood flooring produced in a wide range of materials. It is primarily used in the construction of homes and offices. It is also used for recreational flooring. It is a solid, denser material than classic parquet, and is often lacquered or varnished to provide a warmer, more natural look. Its colours are highly durable, as it is resistant to stains and scratches. History Hooker flooring was introduced to the market in the late 1970s by Malmo AB, and to this day, Malmo AB's classic style hardwood flooring is still available. It was first introduced in the United States in 1997, when Steinway & Sons introduced the Basswood, or "
