You said it's not working properly on Hibernate not coming after i restart the computer After uninstalling, use the Debian repo package instead of the Ubuntu repo package. I have a confusion. Why is Solidworks 2013 required with Solidworks 2015 as part of the package deal? Do I need SP1 for that also as I have? Updated at 08:01 UTC Friday, March 17 2015. ConformaTeam / HH) RH/Slackware, Pure: MM/MINIX, Pure: Updated at 07:19 UTC Friday, March 17 2015. Multimedia R32"Dad. (Cats) This is the best desktop I've ever seen in all my years of computing. I've used Microsoft products for the last two decades and what a difference between using the earlier Microsoft products and what I feel using Solidworks 2013. This product makes Microsoft products seem like they were created in the Stone Age. I have no need for a "D-Buddy", "D-Funnel" or any of the other "add-ons" that came bundled with Microsoft products. I have no need for a "design tools" that doesn't allow me to draw a symbol and resize the object. I have no need for "tools" to "create business documents" they exist already. I don't need to be "shown" what the missing features of Solidworks are. I don't want to have to buy an incomplete, the software comes complete. I was a little concerned about Solidworks 2013 being too "old" in my opinion there was a part that said it only works with "Windows 7 SP1" and I'm running on Linux Mint 17 which is based on Ubuntu 16.04 which uses Ubuntu 13.10. Solverworks 2013 does not have my issue since it's not an old product so that's the one I'm downloading now and will post my findings.
