How we use it The desktop can easily become sort of a dump for all shortcuts and folders you frequently need to access, as well as some which have been there since forever. In order to prevent overwhelming it, you can rely on specialized applications like Shortcuts Pool in order to have an organized view of the desktop, as well as some special places. Comes with a decent variety of categories Before the application is good to go, you might want to make sure that your computer is fitted with.NET Framework. You can launch the application right afterwards, with the main window showing up. It's fitted with a large view section for the selected category, which you find on a side panel. The upper toolbar makes it possible to manage items, and there are also some functions in the context menu. By default, the application comes with a set of predefined categories, such as popular items, folders, programs, recent, Windows, and trash. A simple click is enough to enlist all items inside the main view section. This latter section can be set to thumbnail, list, or report, depending on your interests. Create custom folders and sort items Items on the list are created as links, and only one click is enough to run a program or open a folder. You can choose to access the source location of items from the context menu, where you also find functions to sort, clear, add, remove, or edit. Although categories aren't editable, they do allow you to create new locations in the folders category. Adding new items can either be done in the form of a program or folder, and you also need to provide the target category, as well as a name for the new shortcut. A few last words All things considered, we can state that Shortcuts Pool does manage to make it easier to access frequently used directories and programs. Custom folders can be created to better organize shortcuts, while view modes offer enough details, or simply thumbnails for quick visual identification. Shortcuts Pool Find it on: Google Play Store Apple App Store Key features: Organize and find your favorite programs and folders. Create and manage custom folders, right from the desktop. KeyMACRO Features: KEYMACRO is an automated command line tool with a set of features such as commands, multi-line commands, multi-line arguments, multi-argument commands, commands per line, command window, argument window, argument text, argument value, argument strings, argument parameters, argument integers, argument booleans, argument types, and more. A few examples: Say you've been typing in a system report you're working on at the office, and you'd like to have it automatically be generated every night at the latest. You can create a one-line command which is run as soon as your computer is turned on, and does the job. You can also be more advanced by creating a macro with multi-line arguments, that is, commands where you can provide multiple parameters and arguments. In a similar way, you can make a macro which runs a process, like opening a web page, once every hour. KEYMACRO is meant to allow you to automate repetitive tasks and generate macros for various tasks, which can be later run at any time. Create macros with multi-line arguments You can make macros with multi-line arguments, which is a rather useful feature, especially in the business field. You can define parameters, arguments, and their respective types, such as integer, string, etc. This is a rather simple example: SHIFT + ALT + L or CTRL + ALT + L Create macros with multi-line commands You can create macros with multi-line commands, which is useful for creating commands that span several lines. By creating commands like these, you can perform tasks such as opening a file, launching a program, etc. The example below can be used to launch a file, such as a PowerPoint presentation: SHIFT + ALT + T 2edc1e01e8
