So now its been a while since I've done a review but its so good to be back. We all know that there is a risk in using any software on your computer so the Epson Support Page has a very good document to read that will make you understand the full risks of using this software. I have to agree that the basic setup is not very good, but that has to do with the fact that this software is released for windows 7 and 8. I have run the software on Win 10 and it works great. Just follow the links above and you will get the full details on what you are getting into. Epson Support Page Epson Update Manager is the most important software on your computer. It updates your Epson printer drivers and firmware. It scans your device for available drivers and firmware updates, and then installs them automatically, so you always have the latest and most reliable version of Epson printer drivers and firmware available. You can update your drivers and firmware at any time, even after you start the program. It is very important to update your software regularly, because it will ensure that you have the latest driver and firmware to work with. Fully automatic Epson Update Manager scans your Epson devices to determine which firmware and driver versions are available. It downloads and installs any updates automatically. You can also choose to manually download and install updates. Download up to 300 drivers Epson Update Manager downloads the latest driver versions available from the Epson Web site and can install the entire set. It also downloads the firmware for your printer, scanner or multifunction device and

## What's New In?

Easy to use software to add printers to a network in your home or organization. It provides a centralized tool to easily setup the printer over the network and grant access to all workstations. It supports TCP/IP and also allows you to scan for a printer that already exist on the network. What's new in this version: - Added new option to configure the printer - Auto generated certificates stored in the computer system when required by EpsonNet SetupManager - Printer scan in the installation process - Updates to the English language - Added Portuguese language This driver allows you to enable and/or disable the printing functions of your printer, and it requires the presence of a network and the corresponding IP address, among other conditions. The installation process is quick and easy. You will need to identify the file that should be copied to your system (either from the Epson website or directly from your own computer) and double click on it. The installation wizard will open and you will be guided through all the required steps. Hassle-free installation and user-friendly GUI The setup procedure is a fast and easy job that does not require too much attention. The interface is straightforward and does not include visually attractive elements, yet it is simple to navigate. It consists of two windows that allow admins to select shared devices and those over the network, as well as to manage them, respectively. Locate network devices and add them The first step is searching the local network or other (by specifying the network address and subnet mask) for available devices; results show the name, IP and MAC address for each identified item. In order to add one, it is necessary to indicate a device name, connection settings, printer parameters (e.g. include file in the package, test print, set as default printer) along with several scan options. Manage printer devices and configure general settings All devices are added to a list where it is possible to delete printers and launch applications, among others. The printer driver can be saved to overwrite the current one. The toolbar, select device window and status bar can be hidden while users can switch to another UI language, update device information with one click, edit package information, as well as restore all settings to default. Evaluation and conclusion There were no type of stability issues in our tests, since EpsonNet SetupManager did not hang, crash or pop up error messages. It runs on low CPU and RAM, so it does not put a strain on computer performance. All in all, it serves its purpose and needs the configuration of just a few settings to quickly assign printers to network workstations. Description: Easy to use software to add printers to a network in your home or organization.
