The focus in this version seems to be in speed and performance. What this means is that the number of features have been cut down and the program is streamlined rather than sprawling out. This seems odd in fact, as this is the same software everyone loves for editing. But the newer versions are more streamlined, with a focus on speed, performance and ease of use. This is definitely the case with Lightroom. Even so, I experienced some major bugs in the latest few versions of Lightroom, as well as some performance issues. The most serious of these was when I checked the file size of certain images. Lightroom often showed me that they were over 300MB large and down-sampled versions showed up as if the original image is over a Gigabyte. The problem was that the file was not getting opened properly and I saw an error message if I tried to run a DNG or TIFF. So, I turned off auto-extending and the problems went away - until I turned it on, that is. Then I couldn't make changes. Time to call Adobe. For now, we can't be too upset about this. At least this is still the current version. We'll have to see how it develops further.

1. You can have complete control over your editing options, and change them to your liking.
2. It is by far the best tool available for high-quality, high quality graphics. With this software, you can load, modify, and blend photos together in a snap.
3. It can significantly reduce energy consumption and add more efficiency to your work.
4. A wide range of filters can be applied to images to help you make improvements.
5. With photo editing software, you can get up to four times speed of the regular way of editing photos. It's that fast.

Designer and artist can take the peak of their skills with the help of this amazing software.

While the above photo is an accurate representation of the way the Watermark appears, we've gone

a step further here, and have added a realistic looking boat to a view of the Lake. This provides the perfect opportunity to show this new, updated method of adding a watermark. Let's dive into the technique. The first thing we're going to do, is add a photo of a boat to our image. In this case, it's a little toy boat from the toy section of the store. The photo has been loaded into Photoshop, and the watermark will be added. Now that we have a photo of a boat, we're going to add a new layer to our image. Once added, we're going to drag a new layer above it within the layer palette. Next, it will stop stacking. It will feel like it's sitting on top of the photo layer. This means it will overwrite the lower layers when the new layer is selected. Now the layer is selected. We can now click and drag the layer to the top of the layers palette. With our final toolbar action selected, click ok. The new layer will be selected. The new layer now has the watermark, and looks like it's sitting on top of the photo. The above Photo is an indication of what's possible, but at no time is there any manipulation of the original image. The new layer isn't selected, and the new layer doesn't extend on top of the image. This is to prove that the technique was able to be applied to the content without any impact on the original image. It was tested to prove that the technique would work if the content was changed. e3d0a04c9c
