Avanset Visual Certexam Suite 3.2.1 Crack And Serial 228.Q: Upgrading from SaS 3 to SaS 4 on Windows Server 2012 R2 I would like to migrate our Oracle 11.2 database from SaS 3 to our current SQL Server 2016. I know SQL Server 2016 supports both Oracle and SQL Server, but I want to stick to my Oracle software and databases. I am looking for help on the following: Setting up Oracle and SQL Server on the same server? How do I know what DB is currently running on which instance? Is there a way to migrate and configure everything from Oracle 11.2 to Oracle 11.2 using SQL Server Migration tools? How can I migrate the database to new instance? I know for migration it's possible to use the Oracle Migration tools. But can we use SQL Server Migration tools to migrate the SQL Server databases? A: Building on Rolf Mertig's answer from the comments above, "how do I know what DB is currently running on which instance?" Well, this is rather easy, but the details differ, depending on the Oracle and SQL Server versions. If you're using 11.2.0.3 and the instance name is master, then the Oracle instance would be named ora##, as listed in the 'Current Databases' view of the SQL Server Management Studio. If the instance is named server1, then you can use the following query: SELECT instance\_name, sysname FROM sys.dm\_exec\_sessions WHERE login\_time > DATEADD(hour, -12, GETDATE()) AND ( login\_time < DATEADD(DAY, 1, GETDATE()) OR sysname = 'server1' ) This query is from here. For the 11.2.0.3 version, it simply checks if a SQL Server session was started in the last 12 hours and that the active SQL Server is server1. How to migrate
