Next up is the new equation engine. I have not had the chance to check how well it works yet, but I like the fact that it offers to perform the equation for you, so you do not have to tediously mess around with the Algorithm option in the Photoshop Options menu. I also like the feature of telling Photoshop that I know how to do complex image processing and that I will take care of the processing for me. This allows me to concentrate on the creative aspects. This update also introduces brush features for the first time in Photoshop. You can now use the Brush tool in multiple ways, including in the Color Selection and Paths tools. Depth-of-field tools now have a Radius option that lets you control the distance at which an Out of focus effect is applied. The original OOF preview is now also faster, so you do not have to wait so long for it to return its results. An Auto-Flare option now automatically adjusts the Noisiness level and Width of a Smart Flare effect. Links to virtual keyboard shortcuts are now available in the Keyboard Shortcut window. I am running LR 5.2 on a new home computer, a late 2018 22" Acer monitor. The computer is on the same SSD as my main work machine which runs LR 5.2 also. I am using the Psd viewing feature that 'play' the psd file in a window on the monitor. This has been the great benefit of the new Psd viewing feature. I can run LR from my work computer, while in Photoshop on my home computer and have my work in a window on the computer monitor. The only downside is for me is that when sliding the Psd preview window back to the left side of the screen, it brings the view into Photoshop. It would be nice if just a simple task bar icon could be placed on the left side of the window that would close the window. Another thing is that maybe a shortcut key be placed beside the task bar icon that would close the window. Another 'bug' that I found from when using this software, is that if you activate the Psd viewing feature and then close the work file. The psd file will no longer show up in the psd selection drop down list. It would be really nice if the psd file could be set to remain as is and not disappear out of the drop down list. I will continue my use of the new Psd viewing feature and see it as a real bonus. My main need is to be able to view the psd file on the screen as a Psd file from multiple computers or from my iPhone. Thanks for the new Psd File Viewing feature! I will see about trying to write our a'skin' for this new feature.
