One of the most popular add-ons, Layer Comps, has a new feature called Perfect Fills. Layer Comp fills any boundary, adds or subtracts detail, and works with different types of layers. Layered Adjustment Layers work like a layer mask, allowing you to use any adjustment layer as an alpha channel, even to mask out parts of the layer. You can eventually digitize your layer assets with the Add to Collection function. You can also apply filters to your

Assets within the Comp menu. The Newton Physics engine is strong and quite fast. CS6 still has slightly better raw image support than Elements, although it's a small difference. Theme and pictorial themes aren't supported, but you can download new ones. The printer and Artboards options are gone. The Guided Edit option doesn't run with DNGs, and the Picture-Specific in-place editing is gone. Adobe Shape Layers gives you the most modern way to shape and manipulate elements. The Expression tool is easier to use, drawing tools are clearer, and new dialog elements let you drag and drop and apply expressions. In place editing tools add and subtract to or from an object, and you can still use selections tools, masking tools, and paint tools. After you finish editing, you can use the venerable clone or mask tool to "clone and mask" your shape layer. This was added in Elements 12, but is now one of the best tools in CS6's editing tools. A lot of the functions move to a new tab called Adobe Charlie. You can do a lot with this tool, like create a special color profile, preview color in dimensional mode, crop, resize, and transform. If unsure which crop, resize, or transform tool to use, get help from the friendly OS (Object Selection) tool. Its feature detection tool turns those features visible, so you can also apply functions to a selection. Once you find the crop tool, use the grid to align the image before you resize.

If you conduct a swap, the colors will be a subtractive **color mixing** (which can be seen as an opposite of Photoshop) which means that you will reduce the colors in the image. This is important to notice if you weave colors together without letting them blend and then use it as a comparison to make changes. Jumping back to the **swapping**, you can use the **exchange** feature which simply asks you to select and drag the two colors over each other and they will swap.
