The question in the title (or the one from the title's reference) is: what are the computational complexity of the following problems? for the function: given  $f(x)$  is a polynomial and  $a$  is a real number find the period of  $f(x)$ ; given  $f(x)$  is a polynomial and  $g(x)$  is a regular graph and  $d$  is an integer find the  $d$ th smallest period; for the graph: given a graph  $g(x)$  and  $d$  is an integer find the  $d$ th smallest period; given a graph  $g(x)$  find the period. Note:  $g(x)$  may have multiple cycles. A: The first problem is in coNP, and the second problem is in NP. To see this, suppose for contradiction that such a function  $f(x)$  has two distinct periods  $T, 2T$ , where  $T$  is maximal (since it cannot be increased). Then  $T$  is rational and can be written in the form  $\frac{p}{q}$  where  $p$  and  $q$  are coprime odd integers. Let  $r$  and  $s$  be
