faced with the dreaded 'Save As' dialog. Photoshop CC supports a multitude of actions, allowing a user to change the output of a selected file by executing a given action. Actions can be used to add text to a selected image, flatten an image, resize an image, add a blur effect to an image, or convert the file format. Actions are executed using the Edit/Scripts/Actions menu. Before you get started creating your designs, it is important to know a bit about how the layers work in Photoshop. Start by creating a document by pressing "File" > "New". Press "File" > "Open" to open the document. The new document will be opened with the background set to the default of white so be sure to change that to black using the preset "black in white" in the top right-hand corner. Press the "Control" ("Ctrl" on a Mac) key and click the "Background" tab to open up the options. In this case, the text is a simple "Hello World". By double-clicking on the layer with the hello word, the layer will become active. To create a faded blur, I will select the layer by clicking on the layer thumbnail on the Layers Menu and in the menu of the top right-hand corner, choose "blend" and enter a percentage (70 for this example). Now, simply drag the layer above the layer with the hello word and hold the shift key down when dragging. This will allow you to scale the layer up and down vertically. To create a softer blur, press the "Toggle Blending Options" icon on the top right-hand corner of the program. e3d0a04c9c

Sharing for Review is a great new feature that you can use with others. You can create private or public groups in the cloud. All you need is the cloud storage you are using. You can also share the current document that you are editing, or any duplicated layers. The file that you are sharing can be native or be a Photoshop (.psd) document.

To start sharing for review, go to the File menu and select *Share for Review*. Next, you will land on the Share Review screen. The first thing you will do will be to invite others to join the group. You can also choose to import a folder of files or select the current document or any duplicated layers.

Using Share for Review you can share the current document you are editing while considering any issues that might arise. You can also work with layers and have immediate access to any duplicated layers.

When others join the group, you will remain as the host for the file and they will get added to the list right at the bottom of the left pane. The file will also appear in the right-side pane.

Photoshop now has a feature called Sky Replacement, which takes the place of sky conditions by replacing any sky or clouds in your images. This replaces the sky with a more neutral sky if you're working outdoors. You can turn this feature "on" or "off" via the Tools menu bar. You can also change the color of the sky, the size of the sky or the foil. You will see these settings at the bottom of the right sidebar. To learn more, you can read Alexa's blog post, " How to Remove Sky or Sun from Photoshop ," on how to figure out the best settings for your photographs.
